

PUTTING CONTROL AT THE DOCTOR'S FINGERTIPS...

- Eliminates inadvertently activating the monopolar foot pedal
- Puts activation control at your fingertips
- Offers more convenience than a foot pedal

The BovieButton® allows you to control activation of the RF generator with your fingertips, eliminating inadvertent activation of the monopolar foot pedal.

The tactile and audible “click” of the buttons allows the physician to focus on the operative field instead of searching for the foot pedal. The BovieButton™ adapts to nearly every monopolar accessory or scope.

RHSW Bovie Button™ with adhesive back, “T” connector and 10 ft. cord
